DETAILED ACTION

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: TWO-PIECE EXCITER DIODE WHEEL WITH SPOKES FOR AN AC GENERATOR.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 14 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicants admitted prior in the preamble portion of Jepson claims 1 and 14.

Applicants admitted prior shows the invention as claimed except for the spokes having an outer surface of area substantially greater than the minimum cross sectional area of the spoke. In the same field of flywheel-like structures having spider type spokes extending radially outward from a supporting shaft, Reist US 559910 teaches increasing the area of the outer end on spoke E, for the purpose of supporting the peripheral drum via a dovetail groove or mortise (see lines 67-69). At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to increase the end portion of the spokes of applicants admitted prior art. One of ordinary skill in the art would have been motivated to do this to better support the peripheral drum. Re claim 16, note that the pad of Reist overhangs the spoke.

Allowable Subject Matter

Claims 2-13, 15, 17-22 are would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Odakura shows a diode wheel with spokes in figure 1. Howland-Sherman teaches using bolts to join the spokes and peripheral drum of a flywheel, for the purpose of absorbing tension stress, see page 2, lines 27 to 34. Meusel et al.

Art Unit: 2834

discloses a rotating thyristor arrangement for a turbo-generator suited for very high centrifugal force loadings.
